

GDD 30

Status: Know It

Knowing your status is power

The own-your-sexual-health game for ages 15-18. It reframes the most avoided act in sexual health, getting tested, as empowering routine self-care, builds a personal prevention stack, equips honest partner talk, and removes fear with the truth that treatment works (HIV manageable, U=U; most STIs treatable, several curable). Dignity for all, zero stigma. Comprehensive but never explicit. Seven mechanics, 24 choice-and-voice moments, zero "tap the right card". Scorecard: passed.

Knowing your status is power.

Where Outbreak: Stop the Spread (g23) taught infection as a population-level strategy, Status: Know It makes it personal and adult: owning your own sexual health. It reframes the single most avoided act, getting tested, as empowering, routine self-care, and builds the full personal toolkit: comprehensive prevention, honest partner conversations, effective treatment, and unshakeable dignity. Its message is liberating, knowing your status is power, not shame. The game strips fear and stigma out and replaces them with ownership: a near-adult who tests because it's smart, prevents because they choose to, talks to a partner because they care, knows treatment works, and refuses to judge anyone, including themselves. New v2 build.

FIELD	VALUE
Node / gameld	g30 · status-know-it (confirm exact id against engine-host)
Chapter / ages	Chapter 5 · ages 15-18 · adult / matter-of-fact
Thread / topics	F · Sexual & Reproductive Health · UNESCO 8.2, 8.3

Testing is power; treatment works; dignity for all. Testing is routine self-care, not an admission of guilt, and you can't tell status by looking, only a test tells you. Treatment works: HIV is a manageable condition and **U=U** (undetectable = untransmittable) means effective treatment stops transmission; most STIs are treatable and several are curable. A diagnosis is information to act on, never a verdict on a person, and dignity, for your own status and everyone else's, is non-negotiable.

Owning it, with dignity.

From the Chapter 5 personas (15-18). Near-adults who'll soon manage their own health and relationships, where fear of judgement is the single biggest barrier to testing. This game meets them as capable adults and hands them ownership.

PERSONA	WHAT THEY NEED HERE	THE MECHANIC THAT SERVES IT
Vijay, 17	To make testing routine and agree protection with a partner.	branch + role-play : own it, talk it.
Sneha, 17	To meet a disclosure with dignity and shed her own shame.	reflect + strike-rewrite : dignity, no shame.
Arjun, 17	To build a prevention stack and ask for a test without embarrassment.	sort + role-play : the stack, self-advocacy.
The Counsellor	To route confidential testing, and any coercion, to real help.	match + branch : services & safeguarding.

Why this works (the evidence). Stigma and fear are the top reasons people avoid testing, so reframing testing as routine, empowering self-care, and removing fear with the truth that treatment works, is what actually changes behaviour. U=U (undetectable = untransmittable) is settled science: studies found zero transmissions from an undetectable partner. Most STIs are treatable and several curable. Prevention is a layered, chosen stack (condoms, the HPV vaccine, PrEP where relevant, testing, disclosure), and in India NACO ICTCs offer free, confidential testing.

Seven moves, led by the choice.

It's an ownership tool, so **branch** leads (test, prevent, talk, support), with **strike-rewrite** clearing the shame, stigma and fear myths, and **sort** mapping the facts. Mechanics rotate; the same one never runs twice in a row.

MECHANIC	THE YOUNG PERSON DOES	EMBODIES	N
branch (own it) <i>signature</i>	Chooses to test, prevent, talk or support, and sees it through.	Ownership.	18
strike-rewrite	Clears a shame, stigma or fear myth ("testing means guilt").	Conceptual change.	18
reflect	Considers power, dignity, self-respect, no shame.	Self-application.	17
sort	Maps testing facts, the prevention stack, curable vs managed.	The full picture.	13
match	Pairs a tool to its job; a need to its service; a term to its meaning.	Connections.	8
role-play (voice)	Brings up testing; discloses; shuts down stigma; asks for a test.	Voice; dignity.	6
spot	Spots the shame-talk or stigma hiding in 'normal' talk.	Reading stigma.	4

24 of 84 moments are branch or role-play. Binary "tap the right answer": **0%**.

The two-test, passed.

Is it fun?

It plays calm, empowering and stigma-free, and the central emotional beat, the quiet power of "I know my status", genuinely lands. Building your prevention stack feels like assembling a personal loadout you own; the "treatment works" reveal removes real fear from a diagnosis; and being treated as a capable adult, never lectured or scared, is the appeal. Nothing is graphic, nothing is shamed.

Is it teaching?

Yes: that testing is routine, empowering self-care and how to access it confidentially; how to build a comprehensive prevention stack; how to talk with a partner about status and protection; that HIV is manageable and U=U means treatment stops transmission, and most STIs are treatable or curable; and to carry dignity and anti-stigma into their own health and how they treat others.

The belief it moves. From "testing means you did something wrong; you can tell by looking; an HIV diagnosis ends your life; talking ruins the moment; people with HIV should be avoided" → "testing is power; only a test tells you; treatment works and U=U; talking is caring; and dignity is for everyone, including yourself."

Built, not bolted on.

84 researched scenarios across the status → prevention → talk → treatment → dignity → own-it arc, evidence-based and India-grounded. Full library in the companion JSON.

CATEGORY	N	LEAD MECHANICS	COVERS
Know your status	16	strike-rewrite, sort, branch	Testing as self-care; window period; confidential access.
The prevention stack	14	sort, match, branch	Condoms, HPV vaccine, PrEP, testing, disclosure, layered.
Talk about it	13	role-play, branch, strike-rewrite	Partner talk on status and protection; 'ruins the moment' myth.
Treat & thrive	16	strike-rewrite, sort, match	Treatment works; U=U; curable vs managed; no fear.
Dignity, zero stigma	13	strike-rewrite, reflect, sort	Status isn't character; confidentiality; anti-stigma.
Own it: decide & access	12	branch, match, role-play	Where to test (NACO ICTC), safeguarding, putting it together.

The U=U flip + a 'know your status' branch, verbatim.

flip: "Someone on HIV treatment can still easily pass it on."
 UN -> "Someone on treatment can still easily pass HIV on."
 RE -> "Undetectable = untransmittable (U=U): effective treatment means it can't be sexually trans

branch: "You want to test but worry it won't be private."
 best -> "Use a confidential service like a NACO ICTC centre" (free and confidential)

What this game flips.

MYTH (UN ERASES)	TRUTH (RE WRITES)	BASIS
Getting tested means you did something wrong.	Testing is routine, responsible self-care, like any health check.	Testing = self-care.
You can tell someone's status by looking.	Many STIs have no visible signs; only testing tells you.	Testing basics.
An HIV diagnosis is a death sentence.	With treatment HIV is manageable and people live full, healthy lives.	Treatment works.
Someone on treatment can still easily pass HIV on.	U=U: effective treatment means it can't be sexually transmitted.	U=U.
STIs are permanent and untreatable.	Most are treatable and several are curable.	STI treatment.
Talking about testing ruins the moment.	A caring partner welcomes it; looking after each other is intimacy.	Partner communication.
People with HIV or an STI should be ashamed and avoided.	A health condition says nothing about worth; dignity is for everyone.	Dignity / anti-stigma.
Stigma is harmless, just words.	Stigma stops people testing and getting care, so it causes real harm.	Stigma harms.

The micro-loop.

1. **Open.** Sam (young-adult) poses a status question, a prevention choice, or a partner-talk scenario.
2. **Learn & build.** The young person learns, then builds part of their own routine, stack or conversation.
3. **Own it.** They choose to test, prevent, talk or support (branch), as self-respect in action.
4. **The flip.** UN clears a shame or fear myth; RE replaces it with power and a fact (U=U, treatment works).
5. **Dignity & access.** Anti-stigma throughout; Find Testing / Get Help one tap away (NACO ICTC, doctor, trusted adult).
6. **Sticker.** The Know-It badge; GameDone records once.

Signature surface: the **"I know my status" beat** and the **prevention-stack loadout**. It deepens Outbreak (g23) into personal ownership, pairs with My Choices, My Future (g29), and leans on Mutual (g31) for the consent inside its partner conversations.

Empowering, never shaming, never explicit.

- **Register.** Ages 15-18, adult and matter-of-fact; a confident health resource, not a teen app.
- **Empowering, never shaming.** Testing and care are framed as self-respect; no scare tactics or moralising.
- **Comprehensive, non-explicit.** Full sexual-health information presented factually, never graphically.
- **Dignity for all.** Zero stigma toward any status; people are never linked to character or a group; confidentiality is taught.
- **POCSO-aware & distress-aware.** For under-18s the law's protection is foregrounded; any disclosure of coercion, abuse or crisis routes to help.
- **Delaying respected.** Not having sex remains a fully respected, certain option alongside every tool.
- **Access & privacy.** Audio, offline, low-end build; India-grounded (NACO ICTC, RKSK); the routine and Q&A are on-device, never tied to an identity (DPDP-aligned).

Find testing & help (India). Free, confidential HIV testing: a NACO ICTC centre. Adolescent SRH care: an RKSK clinic or a doctor. Pressure, coercion or abuse (a safeguarding matter for under-18s): a trusted adult or doctor. The red ribbon stands for solidarity, not pity.

v2 schema, scorecard-gated.

- **gameld. status-know-it** — node.game === GameDone key === registry id (confirm exact id in engine-host).
- **v2 mechanic-embodiment schema.** type + typed payload; the **branch** ownership move leads, with **strike-rewrite** for the shame/fear myths.
- **Fact-checked content.** U=U, testing window periods, STI treatment/cure, PrEP options and the India services (NACO ICTC, RKSK) verified; flag any medical edit for re-verification.
- **Scorecard-gated.** Passed all eight checks (7 mechanics, top mechanic at 21%, 0% binary, 24 autonomy, 18 UN→RE, 5 personas, 100% completeness). Re-run score_gdd.py on any edit.
- **Help-resource hook.** "Find Testing / Get Help" via the shared component (NACO ICTC, RKSK, doctor, trusted adult); coercion routes to safeguarding.
- **Tracked.** build_gate.py finalize advances g30 to v2 PASS only after order, read, score, audit and artifact gates pass.

Ethics contracts (never traded for engagement): empowering not shaming; comprehensive but never explicit; dignity for all; confidential; treatment-works truth (U=U); POCSO-aware; made-for-India.

Why this works.

- **Reframing testing beats fear-based messaging.** Because stigma and dread are the top barriers to testing, presenting it as routine, empowering self-care, and removing fear with "treatment works", is what actually raises testing and protects health.
- **U=U changes everything.** Since the settled science is that an undetectable viral load is untransmittable, teaching U=U dissolves a huge amount of needless fear and stigma and reframes a diagnosis as manageable.
- **Dignity is a public-health tool.** Because fear of judgement keeps people from testing and care, building anti-stigma and self-respect is not just kind, it measurably helps more people test, treat and thrive.
