

GDD 29

My Choices, My Future

Whether, when and how — your call

The reproductive-choices game for ages 15-18, and the opener of Chapter 5. It gives near-adults the full, factual picture of contraception, the real choices about whether, when and how, the rights and confidential services that make them possible, and a values-based way to decide. Mature and matter-of-fact, free of pressure in any direction, delaying fully respected, never explicit. Seven mechanics, 27 choice-and-voice moments, zero "tap the right card". Scorecard: passed.

Whether, when and how — your call.

My Choices, My Future opens Chapter 5 and deepens Plan It (g22) into the comprehensive reproductive-health knowledge a near-adult deserves: the full range of contraceptive methods, the real choices about whether, when and how to have children, the rights and the services that make those choices possible, and the decision-making skill to weigh them against one's own values and future. Its stance is mature and autonomy-first: these are the young person's own choices, made with complete, accurate information, free of pressure in any direction. Delaying or not having sex is fully valid, respected, and the only 100%-certain option. New v2 build.

FIELD	VALUE

84 scenarios	7 mechanics	16 myth-flips	27 choice & voice	0% binary taps
------------------------	-----------------------	-------------------------	-----------------------------	--------------------------

Your choices, your information, no pressure. The whole game applies no nudging toward or away from any choice, including the choice to delay. Comprehensive, accurate information is provided because near-adults deserve it and will soon need it; the skill taught is to weigh options against your own values and own the decision. Beyond the non-negotiables of consent, safety and law, the diverse, legitimate choices people make are respected.

Near-adults, real choices.

From the Chapter 5 personas (15-18, "the threshold"). Identity, the career-or-marriage fork, relationships and rights all get real here, and the future presses hard. This game meets them as the capable young adults they're becoming.

PERSONA	WHAT THEY NEED HERE	THE MECHANIC THAT SERVES IT
Sneha, 17	To own her future and her timeline, free of family/peer pressure.	reflect + branch: whether & when is hers.
Vijay, 17	The full method picture and how to agree protection with a partner.	sort + role-play: dual protection, talk it out.
Arjun, 17	To ask a clinician without embarrassment, and decide by his values.	role-play + branch: self-advocacy.
The Counsellor	To route confidential access, and any coercion, to real help.	match + branch: services & safeguarding.

Why this works (the evidence). Methods sit on an effectiveness tier by real-life (typical) use: LARC (IUD, implant) is most effective (over 99%, nothing to remember); the pill and condoms are very effective with consistent correct use (pill ~91%, condom ~87% typical) and condoms are the only method that also blocks STIs (dual protection); and delaying is the only 100%-certain option, fully respected. Emergency contraception works within 5 days and is not an abortion. Comprehensive information leads to safer, more thoughtful choices, not pressure to act, and in India confidential services exist through RKSK Adolescent Friendly Health Clinics.

Seven moves, led by Decide It.

It's a decision tool, so **branch** leads, the "Decide It" sim weighs genuine choices against your values, with **sort** mapping the methods and **strike-rewrite** clearing the myths. Mechanics rotate; the same one never runs twice in a row.

MECHANIC	THE YOUNG PERSON DOES	EMBODIES	N
branch (Decide It) <i>signature</i>	Weighs a real choice against their values and owns it.	Values-based judgement.	18
strike-rewrite	Clears a method or rights myth ("the pill stops STIs").	Conceptual change.	16
reflect	Considers their rights, values and future, no pressure.	Autonomy.	15
sort	Maps methods, effectiveness, dual protection and access.	The full picture.	13
role-play (voice)	Talks protection with a partner; asks a clinician.	Voice; self-advocacy.	9
spot	Spots the pressure, or the misinformation, in a line.	Reading pressure.	7
match	Pairs a method to its feature; a need to its service.	Connections.	6

27 of 84 moments are branch or role-play. Binary "tap the right answer": **0%**.

The two-test, passed.

Is it fun?

It plays like a calm, trusted adult tool rather than a teen app, and that respect is the appeal. The "Decide It" sim makes consequences and freedom visible, branching futures you steer by your own values; the methods comparison finally makes the options clear after years of rumour; and the whole thing treats the player as the capable near-adult they are. Nothing is pushed, nothing is graphic, and the relief of finally having the full, honest picture is real.

Is it teaching?

Yes: the full range of methods, how they work and how effective they really are; dual protection and emergency contraception; reproductive rights and the whether/when/whether choices; how to access confidential services and talk with a partner and a doctor; and a transferable decision skill, gather facts, weigh your values, choose freely, own it. And throughout, that delaying is valid and respected.

The belief it moves. From "the pill stops STIs; contraception makes you infertile; EC is abortion; my future is decided for me; waiting means something's wrong" → "methods do different jobs; contraception is reversible; EC prevents, not ends; my future is mine to plan; and delaying is a fully respected, certain choice."

Built, not bolted on.

84 researched scenarios across the full-picture → choices & rights → Decide It → access → talk-it-through → no-pressure arc, evidence-based and India-grounded. Full library in the companion JSON.

CATEGORY	N	LEAD MECHANICS	COVERS
The full picture	16	sort, match, strike-rewrite	Methods, effectiveness, dual protection, EC, access.
If, when & whether	13	reflect, sort, strike-rewrite	Reproductive choices & rights; delaying respected.
Decide It (signature)	16	branch, reflect	Values-based deciding; no single 'right' beyond consent/safety/law.
Access & rights	13	branch, match, role-play	Confidential services (AFHC/Ujala), rights, safeguarding.
Talk it through	12	role-play, branch	Agreeing protection; asking a doctor; boundaries.
My future, no pressure	14	strike-rewrite, spot, reflect	Autonomy; spotting pressure; your values, your future.

A Decide It branch + the dual-protection flip, verbatim.

branch: "You and a partner choose to be active and want to avoid both pregnancy and STIs."
best -> "Use condoms (optionally plus another method for extra pregnancy cover)"

flip: "The pill protects you against STIs."
UN -> "The pill protects you against STIs."
RE -> "The pill prevents pregnancy only; condoms are what protect against STIs."

What this game flips.

MYTH (UN ERASES)	TRUTH (RE WRITES)	BASIS
The pill protects you against STIs.	The pill prevents pregnancy only; condoms protect against STIs.	Dual protection.
Contraception now makes you infertile later.	These methods are reversible; fertility returns after stopping.	Reversibility.
Emergency contraception is the same as an abortion.	It delays ovulation to prevent pregnancy; it won't end an existing one.	Emergency contraception.
Condoms don't really work.	Used correctly every time they're ~98% effective, and the only STI protection.	Condom effectiveness.
A girl your age should focus on marriage and babies.	Your education and future are yours; whether and when is your right.	Rights / early marriage.
Wanting to wait means something's wrong with you.	Waiting is a common, healthy, fully respected choice.	Delaying respected.
Knowing all this makes young people go and have sex.	Good information leads to safer, more thoughtful choices, including delaying.	CSE evidence.
You need a parent's permission for any contraception info.	Adolescent-friendly services offer confidential information and counselling.	Confidentiality.

The micro-loop.

1. **Open.** Sam (young-adult) poses a question, a method comparison, or a decision scenario.
2. **Learn.** The young person gets the facts, mapped clearly (sort/match), never graphic.
3. **Decide It.** They weigh a real choice against their own values and own it (branch).
4. **The flip.** UN clears a myth; RE confirms the evidence; the decision stays theirs.
5. **Access & voice.** Reaching confidential services and talking it through with a partner or doctor (role-play); Find Services one tap away.
6. **Sticker.** The My Future badge; GameDone records once.

Signature surface: the **Decide It sim** with its branching futures, plus the clean **methods comparison**. The full picture deepens Plan It (g22), dual protection links to Status: Know It (g30), and the talk-it-through and consent threads carry into Mutual (g31).

Comprehensive, never explicit, never pushed.

- **Register.** Ages 15-18, adult and matter-of-fact; a trusted health resource, not a teen app.
- **Comprehensive, not explicit.** Full information presented factually and as comparison, never graphic or step-by-step.
- **Pressure-free.** No nudging toward or away from any choice; diverse legitimate choices respected; delaying respected throughout.
- **POCSO-aware.** The age of consent is 18; for under-18s the law's protection and the wisdom of delaying are foregrounded, and any coercion or exploitation routes to safeguarding.
- **Confidential.** Privacy and confidentiality are paramount and explicitly taught; the sim and Q&A are on-device, never tied to an identity (DPDP-aligned).
- **Distress-aware Q&A.** Anonymous questions are vetted; anything signalling abuse, coercion or crisis routes to help, not just answered.
- **Access.** Audio, offline, low-end build; India-grounded (RKSK / AFHC Ujala clinics, public family planning).

Find services & help (India). Confidential adolescent SRH care: an RKSK Adolescent Friendly Health Clinic (Ujala). A method or prescription: a doctor or public family-planning service. Condoms / emergency contraception: a pharmacy. Pressure, coercion or exploitation (a child-protection matter for under-18s): a trusted adult or doctor. Confidentiality is part of the service.

v2 schema, scorecard-gated.

- **gameld. my-choices-future** — node.game === GameDone key === registry id (confirm exact id in engine-host).
- **v2 mechanic-embodiment schema.** type + typed payload; the **branch** Decide-It sim leads, with **sort** for methods and **strike-rewrite** for myths.
- **Fact-checked content.** Method effectiveness tiers, dual protection, emergency contraception and the India services/law (RKSK/AFHC, age of consent 18, POCSO) verified; flag any medical/legal edit for re-verification.
- **Scorecard-gated.** Passed all eight checks (7 mechanics, branch at 21%, 0% binary, 27 autonomy, 16 UN→RE, 5 personas, 100% completeness). Re-run score_gdd.py on any edit.
- **Help-resource hook.** "Find Services" via the shared component (AFHC/Ujala, doctor, pharmacy, trusted adult); coercion routes to safeguarding.
- **Tracked.** build_gate.py finalize advances g29 to v2 PASS only after order, read, score, audit and artifact gates pass.

Ethics contracts (never traded for engagement): comprehensive but never explicit; no pressure in any direction; delaying respected; confidential; POCSO-aware; route coercion to help; made-for-India.

Why this works.

- **Comprehensive information makes choices safer, not riskier.** Because the evidence is clear that good information leads to safer, more thoughtful decisions (including delaying), giving near-adults the full picture is the responsible move, not a risky one.
- **Autonomy is the engine.** Since these are genuinely the young person's choices, the game's job is to inform and respect, not nudge, so it applies no pressure in any direction and teaches a values-based way to decide and own it.
- **Access turns knowledge into protection.** Because knowledge only protects if you can act on it, foregrounding confidential services and the words to use with a partner and a doctor is what makes the rest usable.
