

SwipeEd — World / Art Artefact Inventory

Everything that defines the game world's look-and-feel · re-vibe scope · June 2026. A holistic checklist of the artefacts to modify to change the game's vibe. Scoping only.

1. 2D design tokens (the app chrome)

Artefact	Path	Controls
CSS token sheet	src/app/globals.css (~257 lines)	All UI colour: light + dark themes. Brand violet (--brand-500/600), --flag-green/--flag-red, --flame, --accent-amber, --path-*, --grass*, the --app-bg gradient, the full shadcn token set, --radius: 1rem, and the .glass-card / .glass-pill look. Colours are OKLCH.
Fonts	src/app/layout.tsx	Nunito -> --font-nunito (body); Fredoka -> --font-fredoka (display/heading). Google Fonts.
Tailwind theme	@theme inline { } in globals.css	Maps tokens to Tailwind utilities (no separate tailwind.config).

Effort: **Low** — one file re-palette + a font swap changes the entire 2D vibe.

2. Thread colour system (the path's identity colours)

Artefact	Path	Controls
Per-thread hex (source of truth)	master-node-table.xlsx hex column -> path.ts	Node-bubble tint per thread: A #0EA5E9, B #DC2626, C #F59E0B, D #EC4899, E #7C3AED, F #059669, G #475569, E/G #475569, capstone #EAB308.
Per-node emoji	scripts/gen-path.py EMOJI dict (~48)	The icon on every node bubble.

Effort: **Low** — edit the xlsx (or gen-path) and regenerate path.ts.

3. 3D models — GLTF (public/models/, ~1.3 MB, 34 .glb)

- **Core nature set (16)**: tree, tree-pine, tree-pine-small, grass, flowers, flowers-tall, plant, mushrooms, rocks, stones, cloud, flag, sign, platform, block-grass-large, block-grass-large-tall.
- **Companion (1)**: characters/character-female-c.glb (the 3D guide on the path).
- **Winter / 'holiday' set (17)**: holiday/ — tree-snow-a/b/c, tree-decorated-snow, snowman, snow-flat-large/snow-pile, candy-cane-green/red, reindeer, sled, lantern, bench, rocks-small/medium/large.
- **Provenance**: CC0 low-poly (Quaternius nature kit / Kenney-Kay-style holiday kit) — swappable, no licence issue.
- **Loaded by**: src/components/world-loader.tsx; placed in path-scene.tsx.

Effort: **High** — replacing the kit is the single biggest art lift (new models + re-placement + re-rig/animate the companion).

4. 3D textures — shared colormap atlases (public/models/Textures/)

colormap.png (base) + 6 seasonal (_summer, _rainy, _autumn, _winter, _spring, _spring_blossom) + characters/Textures/colormap.png + holiday/Textures/colormap.png. One shared atlas tints all foliage; the active season swaps which colormap is bound.

Effort: **Medium** (high leverage) — repaint/replace 9 PNGs to re-skin the whole world's palette without touching geometry.

5. Season palettes (the core 'world vibe' tokens)

src/lib/seasons.ts (~103 lines) — 5 seasons (Summer, Rainy, Autumn, Winter, Spring, one per chapter), each a SeasonDef: skyTop/skyBottom/bg, fogColor/fogNear/fogFar, sunColor/sunIntensity/ambient, ground {base/light/dark}, colormap, weather. All hex (e.g. summer sky #79bdf7, autumn ground #bf6a2c).

Effort: **Low-Med** — this file + the colormaps IS ~80% of the world vibe.

6. Day / night modifier

src/lib/time-of-day.ts (~41 lines) — day/evening/night multipliers (skyMul, fogMul, lightMul, warmth, night, lamps) + a per-phase tint; WARM #ffe2b0, MOON_TINT #a8b8e6. Composes on top of the active season (final look = season x time-of-day).

Effort: **Low**.

7. Scene composition (the renderer)

File	~Lines	Controls
src/components/path-scene.tsx	1425	The R3F scene: sky dome, fog, sun/ambient lights, node-bubble materials & states (playable/soon/done, emissive glow, grey-out), the path mesh, camera/fly-through. The big tuning surface.
src/components/scenery.tsx	78	2D SVG scenery props (hardcoded hexes, e.g. #7a5a3a, #f0a6c0).
src/components/weather.tsx	365	Particle FX: rain / snow / leaves / petals.
src/components/world-loader.tsx	40	GLTF asset loader.
src/components/learning-path.tsx	346	The fallback 2D 'classic' path view (its own styling).

Effort: **High** for path-scene.tsx layout/feel; **Medium** for weather/scenery.

8. Companion (Sam) + brand

- **Sam avatar (2D)**: src/components/games/sam.tsx (SVG, violet #7C5CFC / #1f1147) — in every game.
- **Companion (3D)**: characters/character-female-c.glb + public/companion.png.
- **Brand / PWA**: swipeed-logo.svg, logo.svg, icon-source.svg, icon-192.png, icon-512.png, apple-icon.png, favicon.ico; brand-splash.tsx; src/app/manifest.ts.

Effort: **Medium** (Sam is the recurring face; brand is a handful of files).

9. Feedback 'juice' (minor)

- src/lib/confetti.ts — COLORS = [#62b84b, #e05c52, #4f6ef7, #f5c518].
- src/lib/juice.ts — SFX are synthesized Web-Audio (no asset files to swap).
- Per-game accent hexes are scattered across src/content/games/* and each game's mode-tile ring colours (~40 files for full on-palette polish).

Effort: **Low / many**.

Effort summary (to change the vibe)

Lever	Files / assets	Impact	Effort
Re-palette 2D UI	globals.css (+ fonts)	App chrome	Low
Re-skin the 3D world's colour	seasons.ts + 9 colormap PNGs	Whole world tint	Low-Med (high leverage)
Day/night + weather	time-of-day.ts, weather.tsx	Atmosphere	Medium
Thread colours + emoji	xlsx -> path.ts, gen-path.py	Node identity	Low
Companion + brand	sam.tsx, character-*.glb, logos/icons	Identity	Medium
Swap the 3D model kit	34 .glb + path-scene.tsx placement	Whole world geometry	High
Per-game accents	~40 content/games/* + components	Polish / consistency	Low / many

The 20% that gets ~80% of a new vibe: **globals.css** (2D palette + fonts) + **seasons.ts** + the **colormap PNGs** + the **thread hexes**. The expensive, optional 80% is swapping the GLTF model kit and re-tuning path-scene.tsx.

Source art (raw .glb kits, source PNG atlases, .blend originals) lives with the game / asset kit, not in the engine repo (gitignored, per AGENTS.md). This inventory maps where assets are wired in the app, not the source art. Living copy:
